

DreamTec Command

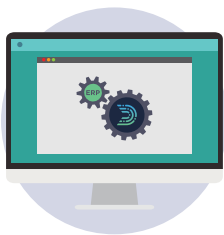

for the Dairy Industry

DreamTec Command is a comprehensive stock, fleet and order management system that enables distribution-based businesses to streamline operations like never before. It can be configured specifically for the dairy sector, offering an invaluable mobile fleet management tool for this fast-paced industry.

As with any short-life, consumable product, the dairy industry relies on the speed and accuracy of distribution to generate profits. However, traditional low-spec systems can greatly hinder growth. DreamTec Command is different. By accelerating distribution and reducing administration, it lets you evolve your business and increase your bottom line.

Our system is ideally suited to companies within the dairy sector who are looking to move away from paper-based or unreliable electronic systems and to gain greater accuracy and productivity across their field and office teams. By integrating with your ERP package, DreamTec Command creates a cycle of critical data that allows you to maximise your existing software and transform your business operations.

How It Works:

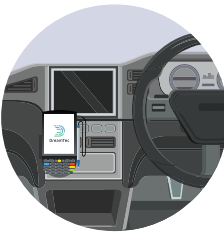

1.

DreamTec Command is integrated with your internal ERP software.

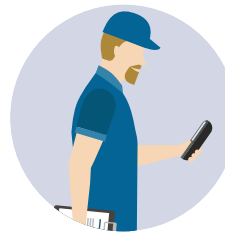

2.

Your office and driver teams receive training on the new system.

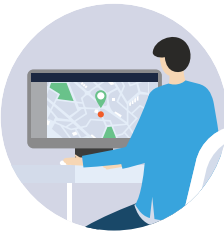

3.

ERP data flows through the online dashboard to the handheld computer in the driver's cab.

4.

Daily orders, routes and domestic rounds are transferred from your ERP package to the driver's handheld.

5.

Your office team can monitor delivery activity in real time.

6.

Using the handheld's big-button interface, the driver prints out a delivery note, invoice or receipt, as required, and hits 'Complete'.

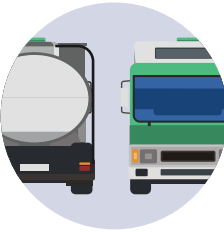

7.

All transaction data is transferred immediately through the dashboard to the ERP live environment, along with a signed POD.

8.

Your office team can account for every stock movement and every driver, issuing invoices straight away if required.

9.

The real-time overview enables you to redeploy resources to accommodate new orders, leading to enhanced customer service and satisfaction.

10.

Paper transactions are eliminated – creating greater accuracy, less duplication, reduced operational costs, paperless filing and an auditable sales trail.

Innovative Features to Accelerate Growth

DreamTec Command offers many benefits that help your business to gain momentum and grow.

Experience the Impact Right Across Your Business

DreamTec Command is not just a tool for operations or transport departments. The online dashboard also provides your sales and finance teams with full visibility and traceability over every order and transaction. Our system is supplied with unlimited dashboard logins, so your business can grow as fast and freely as you allow it.

Improve Productivity and Maximise Routing

The online dashboard presents a total picture of your drivers' activities, creating an auditable trail of daily movements and enabling you to increase productivity. Our system helps you get the most from your driver coverage, letting you route, reroute and add or swap orders in line with customer demand. You can assess onboard stock at any given time, so you always know what additional orders can be accommodated.

The transparency and timed data generated by our system means your drivers are more accountable – resulting in better performance and less downtime.

Eliminate Paper and Reduce Administration

With DreamTec Command, paper transactions and physical file storage become a distant memory.

Orders from your ERP package, or other third-party application, are transferred through the online dashboard, directly to the driver's handheld computer in the preferred delivery route. As soon as each order is completed, a signed electronic ticket is uploaded back to your ERP package and stored in the correct customer account within minutes. Invoices can be processed straight away and, with our calendar tool, any transaction, no matter how old, can be retrieved at the touch of a button. This makes stock reconciliation and month-end accounting much simpler exercises and customer queries can be resolved immediately.

Do More in Real Time

Our robust, easy-to-use, big-button handheld computers provide reliability and advanced functionality. Full signature capture can be carried out on the large screen and an electronic POD is automatically stored within your ERP system.

Daily vehicle inspection reports can also be performed on the handheld. Drivers no longer need to manually fill out and store paper reports. Instead, an electronic copy is transferred to the dashboard and recorded for audit purposes. If a driver does flag a defect, the system can notify your relevant back-office personnel or even your maintenance garage. Parts can be ordered straight away, reducing potential damage to your fleet and time off the road. End-of-day activity summaries are also expedited in the same way.
